Clean air: that's how public health touches our lives every day.

Thanks to public health initiatives, smoking is not allowed in New Hampshire restaurants. Tobacco use and exposure to environmental tobacco smoke is declining.

The cost of a hospital stay for lung cancer in New Hampshire is $23,500 per person. There is no cost to not smoking in restaurants.

By promoting laws, providing education, promoting healthy lifestyles, and researching disease prevention, public health helps to improve health and reduce costs for all.
