

# bhworks

An integrated solution for hub-and-spoke systems of care

## 1. Provide multiple access points to care

Web-based screening tools measure behavioral health and social risk factors, scoring results in real-time; patient is stabilized, triaged, and referred to hub or spoke using BH-Works directory and referral system.

## 2. Implement measurement-based care

Patient assigned care manager and MAT provider; routinely assess symptoms and social risk factors, built-in algorithms alert care manager to changes in symptom rating and social risk scales.

## 3. Connect the care team

SMART on FHIR data interoperability enables diverse care teams across organizations, providing communication and data exchange between physicians, care managers, and behavioral health specialists.

## 4. Analyze data for actionable insights

BH-Works analytics hub provides easy to read charts, maps, and graphs to analyze individual and population level data. The platform also provides tools for site and program management.

## 5. Connect patients to support services

Search for resources by services offered, location, and availability. Connect patients to peer recovery specialists, community-based organizations, housing assistance, and education/employment resources.

## A population health approach to treating opioid use disorder
