Why this matters: tracking referrals by reporter helps us monitor the impact of COVID-19 on our reporting network and identify groups we could activate to look out for kids and support families

Frequency of allegations (biweekly): since COVID-19 emergency began, allegations of caretaker substance abuse and domestic violence have increased. There has been a spike in reports containing lack of supervision over the last four weeks.

% of Screen-ins that contain allegation (biweekly): subset of top categories

Why this matters: COVID-19 may lead to increased incidence of certain types of abuse and neglect. Tracking these data will allow us to adjust our practices and respond to these trends.

Note: 6-month composite calculated for biweekly basis from data from September 1, 2019 to February 29, 2020. Top allegation types displayed above, accounting for 67% of all allegations. Share is calculated by counting the number of screen-ins that an allegation type appears in and dividing by total number of screen-ins for the period. Allegations were only counted once per screen-in so as to not measure duplicate allegations within the same referral (e.g., allegations of inadequate basic care against two parents in one referral only count as one allegation in the chart above).
