§ Between 1998 and 2007, only cases in persons 5 years of age and younger were counted.

* Includes *Ehrlichia chaffeensis*, *Ehrlichia ewingii*, and undetermined *Ehrlichia/Anaplasma* species

¶ Includes O157:H7

£ The CDC Case Definition for Lyme disease was changed in 2008 and again in 2011 (implemented in NH in 2012). Due to these changes, comparison of data across years over time may not be appropriate and data must be interpreted with caution.

+ One case of human rabies reported in 1996. All other cases are animals.

‡ Includes all stages of Syphilis infection

nr= not reportable

Note: All the data in this report are based upon information provided to the New Hampshire Department of Health and Human Services under specific legislative authority. The numbers reported may represent an underestimate of the true absolute number and incidence rate of cases in the state. Any release of personal identifying information is conditioned upon such information remaining confidential. The unauthorized disclosure of any confidential medical or scientific data is a misdemeanor under New Hampshire law. The department is not responsible for any duplication or misrepresentation of surveillance data released in this report. Case counts by year are based on morbidity date, which is the date closest to onset of illness and may represent date of onset, date of diagnosis, or date of report, whichever is earliest. Case counts may not exactly match data published yearly by the Centers for Disease Control and Prevention. Data are complete as of May 21, 2014. Data prepared by Elizabeth R. Daly, MPH, 603-271-4927, erdaly@dhs.state.nh.us
