

New Life Expectancy Dashboard Reveals Overall Health Trends in New Hampshire!

Census tract level data support outreach programs.

Understanding how life expectancy estimates vary from place to place can help public health officials identify areas of most concern and work to address these disparities.

Now health officials can easily compare statewide life expectancy values with those at smaller geographic areas (county and census tract), as well as by gender.

Perfluorochemical (PFC) Blood Testing and Community Exposure Update

New testing data available on Merrimack Village District!

Blood testing for perfluorochemicals (PFCs) wrapped up last Fall for people exposed via drinking water from the Merrimack Village District (MVD) public water system. Approximately 200 randomly-selected people participated in blood serum testing between October 2016 and June 2017. The results, broken

out by age (3 to 11 and 12 and above), and by gender are available in a new dashboard.
