REFRIGERATOR
Upper Alarm limit: Above +8.0°C for 1h
Lower alarm limit: Below +2.0°C for 15min

FREEZER
Upper Alarm limit: Above -15.0°C for 1h
Lower alarm limit: Below -30.0°C for 23h 59min

---

**Date is incorrect.** Should read MM/DD/YYYY

Minimum & Maximum Temperatures not being taken. This should be done every morning and documented on paper temp log.

---

**ALARM!!!**

Temperatures are too cold! Temps gradually got colder but no action was taken. Most of the vaccine in this storage unit has been compromised and cannot be used.

---

**ALARM!!!**

Temperatures are too warm! Because this is a single event with an out of character temperature, it is possible that this alarm was caused by the door of the unit left ajar! Vaccines may be compromised.

---

**ALARMS MEAN TAKE IMMEDIATE ACTION!**

Secure vaccine in the unit until viability is determined. **NEVER** give vaccines when in doubt!

---

**Ext sensor connection error**

Probe is not securely set into data logger device. Remember to listen for the "click". When downloading reports there is a 10 minute limit before it alarms, be aware of time spent on the process.
