See back of page for corrective action entry
This needs to be done 2 times a day
Date and signature of reviewer: _____

*Please use corrective action reports when necessary. **Please indicate with a mark day(s) not in operation. **Do Not Leave Blank.**

Corrective Actions for Cooler Temperatures

The shellstock cooler temperature will be monitored at the frequency stated on the firm's HACCP plan. The temperature must be maintained at 45 °F or less to avoid corrective actions. If the cooler temperature exceeds 45 °F, and shellstock temperature is between 45 °F and 50 °F, the thermostat will be adjusted downward, or the product moved to another Authority approved cooler. If the cooler temperature is above 45 °F, and the shellstock temperature is above 50 °F, then product is placed on hold and evaluated. Evaluation of shellstock will consist of placing a hold on the product and notifying the Authority. Firm will record any corrective action for cooler temperatures below.
